

## Fluid Applied Cushioned Flooring System

- Completely Seamless
- Sound Absorbing
- Anti-Microbial

Introducing our brand new seamless cushioned flooring system with sound-deadening properties.

## What Makes It Special?

Apart from being designed with you, the contractor in mind, this system has some superb features:

**This system combines APU 40 Quiet, vibration and sound absorbent polyurethane, APU 45 Cushioned, flexible polyurethane coating and APU 46, photo-stable matt sealer.**

The APU 40 Quiet incorporates cork granules - instead of the less eco-friendly granular rubber - giving a comfortable surface to stand and walk on that has the added benefit of lowering subsonic/ambient noise.

APU 45 Cushioned has enhanced flexible properties offering greater deformability and making it the ideal top coat for the APU 40 Quiet. It can also be used on its own over timber or floors that are prone to cracking.

APU 46 Matt Sealer gives a chemical and stain-resistant finish that is abrasion resistant and hard wearing.

## Flexible and Scratch-Resistant

*The sample included shows how the layers are built up. You can see the cork encapsulated in the interlayer. You will also notice how flexible and scratch-resistant the system is.*

### System Properties

- Seamless
- Comfortable
- Flexible
- Sound deadening – absorbs ambient sound
- Extremely hard wearing
- Antimicrobial
- Highly resistant to chemicals and staining
- Self-levelling
